AENTHOS Corporate Profile

Who we are, philosophy, capabilities, products and way of working, in two pages.

AENTHOS · October 26, 2026

Who we are

AENTHOS is an enterprise architecture and applied technology firm, based in insurance and reinsurance with capabilities that transfer to other industries. It is based in Ecuador.

Its starting point is neither a technology nor a trend, but identifying what the real challenge is and building solutions that evolve alongside the organization.

Philosophy: technology solves processes, people decide

- **Understand before building.** The starting point is the real challenge, not the technology.
- **Choose the challenges we know how to solve.** When a project requires knowledge we do not have, we say so and solve it with the right specialist.
- **One standard.** The level of rigor does not change with the size of the client; the delivery format does.
- **Real operation, not a sales promise.** The figures we show come from a platform in production.

Capabilities

- **Technology Consulting.** Support until the decision is executed, not just recommended.
- **Technology Execution.** Migration of processes and platforms without stopping the operation.
- **Enterprise Architecture.** Designed for what the business will need in three years.
- **Software Development.** Software designed to evolve with the operation.
- **Systems Integration.** Systems, data and processes connected as a single piece.
- **Applied Intelligence.** AI only where it gives real time back to the person who makes the decision.

Products

- **Smart-RE.** Platform for reinsurance brokers. The project began in 2019 and its first two modules went into production in 2021. AENTHOS is its official distributor.
- **Smart-MGA EVO.** Evolution of Smart-RE in development, for the administration of Managing General Agents (MGA). Not yet commercially available.

Track record

More than 35 years of experience in the insurance market, since 1989; coordination of large-scale technology operations, with teams of more than 300 people, and banking projects.

How we work

Diagnosis, Architecture, Implementation and Continuous operation, with explicit acceptance criteria in every phase. The first conversation, 20 to 30 minutes, is free of charge.

Confidentiality

Published use cases do not include client names, unless the relationship is already public knowledge.
